JAKUB DYSKO CV

PERSONAL STATEMENT

My name is Jakub, I have recently attained a Master's with distinction in Electrical and Mechanical engineering at the University of Strathclyde. My master's project focused on industrial autonomous systems, exposing me to the world of automation through ROS, computer vision, and machine learning. I hope to specialise in a related field by undergoing a doctorate, and am also open to other flexible roles in data analysis, electronics, product design, or other similar domains. My recent research internship provided me with experience in robotics for industrial quality inspection, equipping me with a strong practical foundation and research ambitions. Beyond robotics, my degree offers a highly interdisciplinary syllabus, themed around the integration of electrical and mechanical technologies within complex engineering systems. My time as an undergraduate has also involved volunteering, such as my work as a mentor and youth club assistant, broadening my skillset beyond technical disciplines.

EDUCATION

Masters (Meng) in Electrical and Mechanical Engineering
Graduated 29th June 2026
University of Strathclyde, Glasgow

Grades

I achieved a strong 1st class degree award at Master's level (1st or distinction = 70%+ in relevant accreditation system). My credit-weighted average grades from my 1st to 5th years are as follows, with credit totals according to the University of Strathclyde convention and ECTS standard:

- 1st year: 87% (120 UoS credits, 60 ECTS credits)
- 2nd year: 89% (130, 65)
- 3rd year: 85% (140, 70)
- 4th year: 82% (130, 65)
- 5th year: 80% (120, 60)

Awards and honours

- Dean's list certificate for 2022/23, 2023/24 and 2024/25 academic years
- IMechE Best Student Award 2026 (awarded to the best performing student in the degree cohort)

Interests

- Robotics/automation
- Embedded systems
- Advanced sensing technologies
- Nuclear energy solutions
- Control theory

CONTACT DETAILS

+44 7884 944403

jakub.dysko@gmail.com (Personal)
Jakub.dysko.2021@uni.strath.ac.uk (University)

7 Braid Avenue Motherwell, Glasgow ML1 5ET

24/06/2003

British/Polish

CORE SKILLS

- Mathematics
- Design
- Computer programming and CAD
- Fast learning
- Leadership

LANGUAGES

- **Polish**
  Upper intermediate (B2)

ADDITIONAL CERTIFICATES

- Certified Solidworks CAD design professional
- Distinction for grade 8 piano performance, Trinity College London

More about my degree

Modules

My modules are shared across the electrical and electronic (EEE) and mechanical and aerospace (MAE) engineering departments at Strathclyde. The syllabus covers fundamental theory within these fields over the first three years, laying the foundation for a strong focus on real-world applicability in the fourth and fifth years.

My EEE module selections have revolved around digital electronics and embedded programming. I have gained experience in microcontroller programming, digital signal processing, and FPGA-based design.

The MAE department has provided me with skills in CAD design, dynamic modelling, and structural integrity.

My degree programme also includes curriculum tailored towards integrating these disciplines for applications such as robotics, as well as business modules and other electives. My master's curriculum is grounded in intelligent autonomous systems, reflected by my selection of machine learning (ML) and deep learning (DL) modules, introducing me to state-of-the-art AI-driven technologies such as spiking neural networks (SNNs) and neuromorphic processors.

Projects

Project-based work has characterised the latter stages of my degree programme. I have had the opportunity to work on many significant projects, some of which are listed below.

3rd year group project. This project was my first exposure to integrated design, involving the design and construction of a sound-following robot.

4th year Bachelor's dissertation. Having gained exposure to systems engineering, my individual dissertation allowed me to build upon these skills through designing a tactile phone-based musical synthesiser, achieving a distinction grade for the project. Videos showcasing the device's functionality can be accessed via the following links:

Functions: https://youtu.be/eQcv3VPFw8E

In action: https://youtu.be/dEqBICx1Egc

5th year Master's project. One third of my master's accreditation was attributed to this project, themed around autonomous remanufacturing of end-of-life robots. The goal was to create an autonomous system for disassembly/reassembly tasks. My role focused on object recognition and localisation, with the final deliverable achieving a distinction grade.

WORK HISTORY

Robotics Engineer Research Intern

June 2025 – August 2025 | Centre for Ultrasonic Engineering, University of Strathclyde, Glasgow

Working as a research intern at Strathclyde University's Technology and Innovation Centre (TIC) provided me with valuable insights into state-of-the-art industrial technologies, as well as experience working alongside academics and postgraduates. The work package included a literature review within the field of autonomous non-destructive testing (NDT), and the development of a proof-of-concept robotic system for ultrasonic inspection of geometrically complex industrial welds. The final documentation provided the university with material for a future journal publication, and can be accessed here:

Jakub Dysko Internship Documentation.docx

Controls Engineer Intern

July 2022 - September 2022 | HF, Glasgow, Pollokshields East

A position offering hands-on assistance in the construction and wiring of control panels within a professional engineering firm.

Maintenance Gardener

July 2023 - September 2023 | MIG garden care, Glasgow

Freelancer role involving practical experience with a small gardening company.

VOLUNTARY WORK EXPERIENCE

Mentor Volunteer

February 2022 - May 2023 | Citywise, Glasgow

One-to-one mentoring sessions focused on character building for children aged nine to twelve, with group activities, as well as community events.

Youth Worker

August 2021 - current | Dunreath Boys Club, Glasgow, Dumbreck

Assistant role, involving planning and running weekly activities for boys aged 9-11.

ADDITIONAL DETAILS/OTHER INTERESTS

I have a strong interest in music, having participated in a small university choir as an undergraduate, organising rehearsals and playing the keyboard.

In November 2024 I underwent my grade 8 piano performance exam, achieving a result of 94/100.

I have also gained some teaching experience, occasionally giving mathematics tuition and piano lessons.
